

CORPORATE RISK ASSESSMENT – COVID19 USING HARLOW CIVIC CENTRE FOR STAFF AND THE PUBLIC

Authority/Employee Name :	HARLOW DISTRICT COUNCIL
Service:	ENVIRONMENT & PLANNING
Assessing Manager's Name:	MICHAEL PITT / GRAHAM JARVIS
Assessing Manager's Job Title:	ENVIRONMENT & LICENSING MANAGER / SENIOR EHO
Date Assessment Completed:	15TH OCTOBER 2020 (V1), REVISED 22ND JULY 2021 (V2)
Date for Revision:	WHEN ANY SIGNIFICANT CHANGES TO KNOWN RISKS OR GOVERNMENT GUIDANCE OCCUR

CORPORATE RISK ASSESSMENT – COVID19

USING HARLOW CIVIC CENTRE FOR STAFF AND THE PUBLIC

Foreword

Our overriding principles are to try to keep our activities going, but in a managed safe way.

Evolving guidance and growing knowledge about the virus means we acknowledge that our plans, set out in this risk assessment, are dynamic: they are to be kept under review and change as data/guidance occurs. In accordance with guidance from the Association of Directors of Public Health, we acknowledge that there is not just one control that will reduce risks; we must use a combination strategy of many controls to have an impact.

A working group of senior staff, now known as the Recovery Group, meets on a regular basis to make policy decisions about COVID19 security issues and review new risk assessments from council departments and teams. The Union are included in this process. The Safety Team provide specialist advice to this process as requested by the Recovery Group. Plans for new or significantly changed activities will need to go to the Recovery Group for approval.

Plans to control all other risks from council activities are still relevant in the pandemic and are documented in existing RA's. They should be kept up to date as normal.

The use of PPE, — who should use it, what specification should be used, etc. — is not resolved within this template. Specific teams and individuals will have their own needs according to the different work activities they carry out.

Notes About Risk Controls After 19th July 2021

The proposed controls in this plan will still be relevant to us after many of the national legal restrictions end on 19th July 2021. Reasons why include:

1. Many people may catch the virus as prevalence rises over the summer. It is rising now, and the easing of restrictions after 19th July may accelerate the growth of cases. There may be 50,000–100,000 new cases per day. (For comparison, the winter 2021 peak was around 61K.)
 - 1.1. Unvaccinated, partly-vaccinated and those vaccinated people who are not protected by the vaccine, may get very ill.
 - 1.2. Vaccinated people may be mildly ill and unable to work for a few weeks.
 - 1.3. Some people may get long-COVID symptoms and be off work for much longer.
2. There may also be considerable staff absence caused by staff self-isolating because they are a close contact of someone who has tested positive for the virus up to 16th August. On 16th August those who have been double-vaccinated will not need to isolate if a close contact tests positive. This has the potential to cause disruption to service delivery.

Activity	Person at risk	Significant Hazards	Risk Control Measures
----------	----------------	---------------------	-----------------------

CORPORATE RISK ASSESSMENT – COVID19 USING HARLOW CIVIC CENTRE FOR STAFF AND THE PUBLIC

Activity	Person at risk	Significant Hazards	Risk Control Measures
Working at or visiting the Civic Centre	Employees Councillors Members of the public	Being together: Social contact with people outside of one's own household, increasing the potential for spread of SARS-CoV-2 between people.	<p>Public access to the building has been limited to use of essential services in Contact Harlow on the ground floor of the building. Members of the public do not have access to any other part of the building.</p> <p>The default position for staff who would normally be based in Civic Centre is to work from home, where their situation and their role allows. This has resulted in a significant reduction in the occupancy of the building. This is still the position in over the summer of 2021.</p> <p>Those staff who do come into the Civic to work are being encouraged to spend as little time there as is necessary to do those tasks that can only be carried out in the building.</p> <p>Our Chief Executive has sent clear messages to all staff that they are to stay at home and work where possible.</p>
Working at or visiting the Civic Centre	Employees Councillors Members of the public	Being ill at work: Members of staff who are carrying the virus coming into the Civic Centre and passing it on to other people.	<p>Staff who become symptomatic with the one or more of the known signs of COVID19 have been instructed to stay home until they have taken a test and have the results. If the test result says they have a SARS-CoV infection, then they will then quarantine in self-isolation at home for a duration recommended by government advice (currently at least 10 days).</p> <p>Staff who's close contacts at home display symptoms will self-isolate in accordance with the government's policy.</p> <p>Staff will follow the direction of the government's Test & Trace service. If they are contacted and told to isolate because of a known contact with an infected person, they will do so and inform their line manager.</p>

CORPORATE RISK ASSESSMENT – COVID19

USING HARLOW CIVIC CENTRE FOR STAFF AND THE PUBLIC

Activity	Person at risk	Significant Hazards	Risk Control Measures
Working at or visiting the Civic Centre	Employees Councillors Members of the public	Risk of disease transmission from airborne liquid droplets that travel up to 2m away from an infected person when they breathe, cough and sneeze, but which then fall onto surfaces, rather than remaining in the air (known as droplet transmission).	<p>Where possible, staff and the public will stay more than 2m apart. In situations where that is not possible, other control measures will be put in place. For example, Contact Harlow are using perspex screens for contact with the public in the ground floor.</p> <p>Areas of the building that might force people into closer proximity than 2m, have restrictions on the numbers of people that can use them at one time. The lifts can only be used by one person at a time. The toilets and kitchen areas can only be used by two persons at a time.</p> <p>Line managers will ensure staff who do come into the building occupy work stations and desks that are 2m apart.</p>
Working at or visiting the Civic Centre	Employees Councillors Members of the public	Risk of disease transmission from airborne micro-droplets that could stay in the air for up to 3 hours after being breathed out by an infected person (known as airborne transmission).	<p>Contractors, facilities management and the safety team have reviewed the design of the ventilation system and have taken action to ensure that only fresh air is being supplied and no air is being recirculated through the building.</p> <p>Mechanical ventilation now begins two hours before the building is occupied and does not stop until two hours after it closes, to increase dilution.</p> <p>Four of the seven air handling units use plate heat exchangers, which are by design not prone to mixing outgoing and incoming air supplies. The other three do not have any heat exchangers.</p> <p>Contractors have checked the AHUs for any other potential for air leakage between incoming and outgoing air streams.</p> <p>The four AHUs that would normally recirculate air when the weather gets colder have had that function overridden to prevent recirculation.</p> <p>Staff are being encouraged to wear more clothes in the office on cold days and open windows as far as is tolerable whilst at their work-stations to increase fresh air supply in places where people are working.</p> <p>A brief survey of ventilation levels will be conducted in the most occu-</p>

CORPORATE RISK ASSESSMENT – COVID19 USING HARLOW CIVIC CENTRE FOR STAFF AND THE PUBLIC

			pied and potential least ventilated parts of the Civic over the summer of 2021 using CO2 monitoring as a proxy measure.

CORPORATE RISK ASSESSMENT – COVID19

USING HARLOW CIVIC CENTRE FOR STAFF AND THE PUBLIC

Activity	Person at risk	Significant Hazards	Risk Control Measures
Working at or visiting the Civic Centre	Employees Councillors Members of the public	Risk of disease transmission from expelled droplets from an infected person containing the virus that land on surfaces, which are later touched by another person, who then touches their eyes, nose or mouth (known as the fomite transmission route).	<p>Frequently touched surfaces in common parts of the building are cleaned regularly by facilities staff.</p> <p>All staff and the public sanitise their hands on entering the building at the ground floor using designated dispensers.</p> <p>Staff are instructed to then wash their hands immediately on arriving at their normal area of work, or in the sink in the first aid room on the ground floor next to the lift lobby.</p> <p>Staff who work at a desk are required to clean the desk and other contact surfaces before occupying the workstation and once again when they leave it.</p> <p>Swing bins have been placed around the building for disposal of wipes and tissues.</p> <p>Equipment should ideally not be shared, and if it is, then a suitable sanitising procedure should be introduced.</p> <p>People are encouraged to wash their hands for more than 20 seconds after touching potentially infected surfaces or to sanitise their hands.</p>

CORPORATE RISK ASSESSMENT – COVID19 USING HARLOW CIVIC CENTRE FOR STAFF AND THE PUBLIC

Activity	Person at risk	Significant Hazards	Risk Control Measures
Working at or visiting the Civic Centre	Employees	Risk of serious illness and deaths from the complications of COVID19 to those staff with existing underlying health conditions.	All staff have been assessed by occupational health professionals for their individual risks from contracting the disease. Those who were categorised as clinically vulnerable or extremely clinically vulnerable have had individual risk assessments conducted by their line manager, and where necessary, made adjustments to their role to reduce risks.
Working at or visiting the Civic Centre	Employees Councillors Members of the public	<p>Risk of an inadequate first aid response to an emergency because of fewer first aiders working in the building.</p> <p>Risk of a first aider contracting COVID19 whilst assisting in an emergency.</p>	<p>A new first aid procedure has been created and shared with staff and first aiders that accounts for fewer first aiders being in the building since March 2020. The prime response will be from first aiders in Contact Harlow in office hours and from Stewards (aided by staff at The Playhouse and Water Gardens) out of normal office hours. A separate risk assessment for this activity has been created and will be kept under review.</p> <p>Instructions from the Resuscitation Council and the HSE have been shared with all our first aiders about assisting in an emergency whilst keeping safe from transmission risks.</p> <p>New additional PPE has been obtained for first aiders to use, stored with the existing first aid materials in a number of locations around the building.</p>
